Complex Systems LAB

Grading and Deadlines

- There will be approximately 6 problem lists, with a new problem introduced every 2 weeks.
- Deadlines: typically 2 weeks, with the exact date specified on the problem sheets. **Every one-week delay will result in a maximum grade reduction of 1.0** (i.e., -1.0 for every extra week).
- Reports (freeform: PDF documents, Jupyter notebooks, markdown notes,...) will be discussed during the labs.
- Each report must include well-prepared figures or tables with results, accompanied by captions containing a few reasonable sentences explaining these results.
- After discussing the report, both the report and code must be sent via email to verify that the code was written individually and the results obtained independently.
- All reports must be completed. The final grade for the lab will be the average of the individual grades for each report.
